

## TECHNICAL DATA SHEET

### Inline flat drip pipe Aquaflow series 16 MM-0.2 MM

| Parameter    | Specification                                      |
|--------------|----------------------------------------------------|
| Product Name | Inline flat drip pipe Aquaflow series 16 MM-0.2 MM |
| Model        | RDP1518                                            |
| SKU          | RDP-AF-FD-02-16-700                                |
| Size         | 16 MM                                              |
| Length       | 700 Meters Approx                                  |
| Colour       | BLACK                                              |
| Material     | LLDPE                                              |
| Thickness    | 0.2 MM                                             |
| Spacing      | 40 cm                                              |
| Weight       | 7000 GRAM                                          |
| Origin       | Made in India                                      |

### Product Overview

The drip irrigation product is designed for controlled water delivery in agricultural and horticultural irrigation systems. Product-specific emitter spacing, wall thickness, length, and operating specifications should be selected according to the individual variant.

### Key Features

- Designed for drip irrigation
- Suitable for agricultural and horticultural applications
- Product-specific emitter and spacing options
- Available in different lengths and constructions

### Applications

- Vegetable crops
- Orchards and horticulture
- Nursery applications
- Field irrigation

### Benefits

- Supports targeted water delivery
- Suitable for crop-row irrigation
- Variant selection allows matching to crop and system requirements
